

Introducing the Caregiver and Client Mobile Sites

The [Generations Mobile Site](https://mobile.idb-sys.com) was built from the ground up and specifically designed for phones, tablets, and other mobile devices.

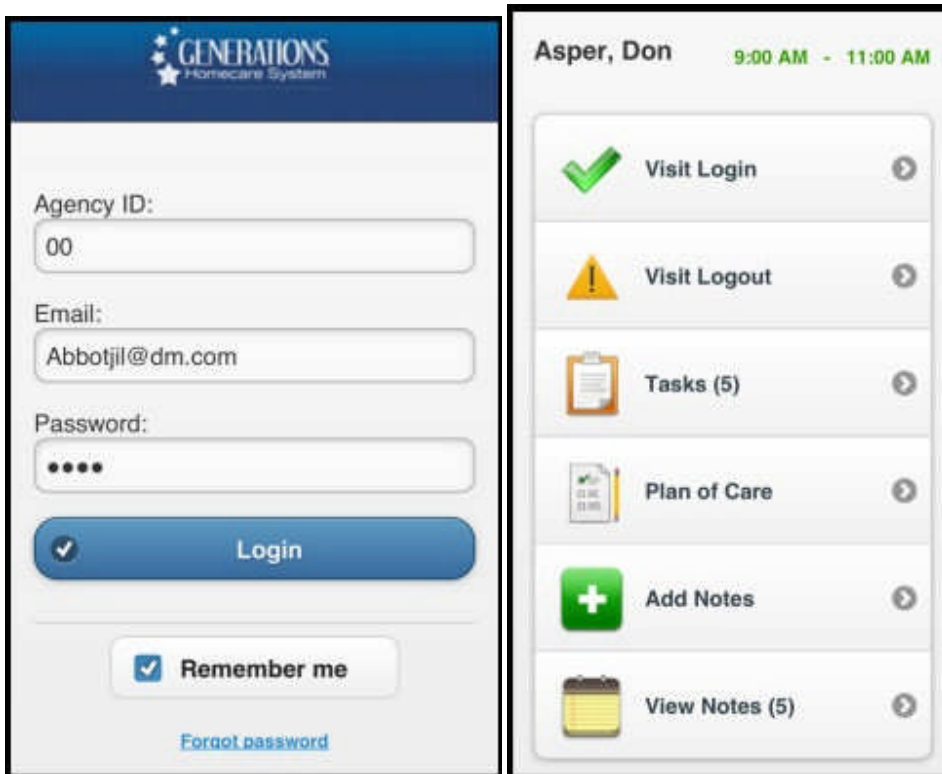

The site automatically re-sizes to fit your phone or tablet screen. Because no scrolling is necessary, the site is an efficient and easy way to work while out in the field.

We are already working on the mobile site for office staff, and anticipate a release later this year. Native app versions of the sites will also be available for popular mobile systems including IOS and Android.

The Generations Mobile Site is accessed at <https://mobile.idb-sys.com>

Caregiver Mobile Site Overview View schedules

- View and complete tasks assigned to the schedules
- View and enter visit notes
- View plan of care
- Verify they arrive and depart using GPS (see below for more information)

Caregiver GPS Visit Verification

By combining Global Positioning System (GPS) technology, Generations Telephony, and any GPS-enabled device, TLC can now verify without a doubt that the Caregiver has arrived at the Client's home.

1. When you arrive at the Client's home and signs into <https://mobile.idb-sys.com> using a GPS-enabled device like a smartphone. Then select the appropriate schedule, and press login.
2. GPS obtains the exact coordinates of your location and sends it to Generations database where TLC can be alerted if the location is wrong.
3. To logout or punch out, you have to repeats the same process: sign into the mobile site, select the schedule, press logout.
